It's City CODE

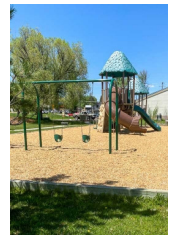

City code at your fingertips. Search American Legal Publishing, code library, Idaho and then Cascade.

No Excuses

Thank you...

Thanks to the Public Works staff for keeping our parks accessible and looking great!

Getting Ready for Winter

Planning on installing a pellet, propane or wood stove?

Free standing stoves require installation and inspection by the Idaho Division of Building Safety. Call 208-334-3950.

Winter is on its way and the weather is still good. Don't wait until the last minute to prepare.

Get your chimney cleaned.
Make needed roof repairs.
Clean gutters.

Gather what you'll need to insulate faucets and pipes in October.

Monthly Water Testing Results

**Collection Date and
Collection Times:**
08/10/21 7:59 & 8:10 am

Results:
In compliance.
No exceedences.

Please, **BE WATER WISE**

Get those dripping faucets and hose bibs repaired.

Reduce irrigation times during the cooler temperatures.

Prepare for winter mulching.

Know the water shutoff valve location for your home.

Plan for Zone 4 Xeriscape plants that are winter hardy.

Plants Conserve Water in several ways as they Adapt to Winter Conditions

Freezing fluid in cells.

To avoid the problem of the fluids within their cells freezing, some trees are able to move the fluids within their cells around. This allows the fluid to freeze safely in “extra-cellular” areas or spaces that are outside of the cells. This helps prevent damage to the tree, and is widely utilized by plants like evergreens.

Creating antifreeze.

By concentrating the amount of sugars, salts and other compounds in their fluids, they lower the point at which these liquids will freeze, meaning it would have to be much colder to damage the plant.

Going Dormant

A third internal change that takes place within plants is dormancy. This is when plants, thanks to the hormones signaling them to begin changing, reduce or nearly stop their growth. Going into dormancy helps plants conserve energy and resources during the colder seasons well as save water in the plant itself.

Dropping Leaves

Water naturally exits trees and plants through leaves, and this process usually helps keep the flow of liquids moving upward through the plant. By dropping their leaves, plants reduce their surface area that is exposed to the cold, drying air as well as save water in the plant itself. This is an important process since the nutrients that were in the leaves are broken down and returned back into the soil.
