Monthly Water Testing Results

Public utilities are required by law to take many expensive samples each month. They also must pay the employees that run them, as well as cover administrative costs.

The City of Cascade tests drinking water based on requirements specific to our permit. The testing locations are dictated by Idaho DEQ based on our water distribution system. Water testing occurs in areas with close proximity to our gravity fed tanks and end of the line locations.

Collection Date and Collection Times:

03/06/25 at 10:30am, 10:45am

Results:

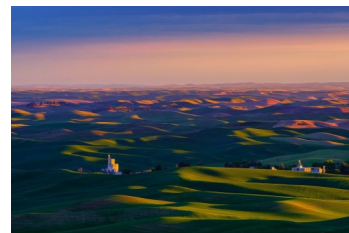

In compliance.
No exceedances.

*Sometimes you see little changes
fluttering their pennons to show you
that a great change is on its way.*

The 3-in 1 Benefits of Keyhole Gardens

*Efficiency in use of space, **WATER**, and Composting*

Keyhole gardens are great for saving water and being easy to care for. They have a circular shape that lets more plants grow in a small space. The composting well in the middle keeps the soil rich and healthy for the plants.

They are also good at saving water. The composting well keeps moisture in, so plants get water when they need it. This is great for places where water is scarce or during dry times.

Keyhole gardens also help reduce waste. They turn food scraps and other organic stuff into nutrients for the soil. This helps the plants and makes gardening more eco-friendly.

These gardens need less water, fertilizer, and weeding than regular gardens. They are perfect for those who want gardening to be easy and rewarding.

Keyhole Gardens Water Efficiency

Keyhole gardens are great at saving water. The layers of organic materials soak up and hold onto moisture. This means plants get water slowly, reducing the need for constant watering.

Also, the central composting well can use *greywater or rainwater runoff*. This cuts down on the need for outside water. It also keeps the soil healthy by adding nutrients.

*Creativity is **KEY** to **successful water conservation...***

Airport Cameras	FAA Funded	Complete
Walks NMain	Grant Funded	Install solar 2025
StormWtr WService way between Cascade & Market Sts.	Grant Funded	Spring 2025
StormWtr WService way between Market & Spring Sts.	Grant Funded	Summer 2026
Street Signs	Grant Funded	Install Spring 2025
Strand Benches	AARP Funded	Install Spring 2025
Strand Paving between Kelley's WWater Park and Pine St.	Grant Funded	Summer of 2025

The Role of Stormwater Systems

Stormwater systems are designed to collect, manage, and treat runoff from rainfall or snowmelt. These systems help mitigate the adverse effects of runoff by controlling its flow, reducing pollutants, and directing it away from developed areas to prevent flooding and protect water quality.

Numerous Benefits

Flood Prevention

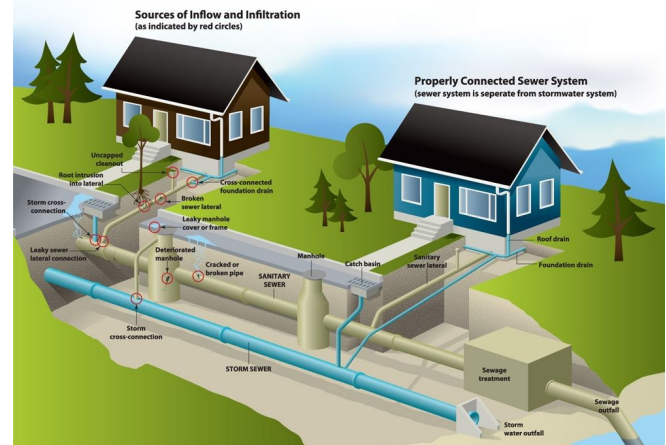

Reduces risk of flooding by controlling the volume and flow of stormwater.

Better Water Quality

of water entering natural water bodies.

Habitat Protection

Reduces erosion, preserves aquatic ecosystems/habitats.
